WORK EXPERIENCE

Junior Front End Web Developer
My Utility Genius - Apr 2021 to Present
- Turn UI/UX designs into prototypes, creating excellent interactions from designs.
- Design new features and also maintain old features.
- Collaborate with back-end developers and web designers to improve usability.

Full Stack Web Developer
Freelancer - May 2020 to Jan 2021
Participated in the frontend and backend web application life cycle. Gathered requirements from the client, understood and integrated them into web architecture.
- Fixed bugs in existing projects.
- Contributed inputs into video chatting app by creating screen sharing, one to one as well as group messaging functionality using WebRTC and socket IO.

Web Developer
Magneto IT Solutions Pvt. Ltd - Jan 2019 to May 2020
It was my responsibility to integrate web pages using standard HTML and CSS best practice. Managed JavaScript frameworks by converting HTML pages.
- Involved in a stock market application in which CRON was used to cluster in NodeJS, which helped reduce the time complexity to 70%.
- Developed social media app which used to connect people based on their relationship(department) like HR, developer, sale. Tech Used: amCharts, D3 Chart, Neo4j, Angular and NodeJS.
- Implemented and optimized complex SQL queries.
- Contributed to the team by training and sharing my knowledge with the new candidates in JavaScript frameworks and database architectures.

- **JavaScript Tutorial Course - SoloLearn -** Oct 2019 to Present

PROJECTS

Bazarlinks
BAZARLINKS.COM provides links to the business associations or professionals associated with every type of manufacturer, wholesaler, retailer, homemade product industry, and commerce services. In the beginning, I had built this project in ASP.Net and later convert the whole website into core PHP.
Demo: Business Links Provider

NPM Package
Array-refactor is refactoring any sensitive data in user collection or any personal data. Currently, by using array-refactor, you can remove that sensitive data before transfer to logs or the public. There are many uses of array-refactor. This npm package is not dependent on any third-party library instead of it is built on JavaScript predefined functions like map and filter.
Demo: array-refactor - npm

JustURL - Web Application
The main use of our web application is sharing URLs (Links) with friends, colleagues, and our beloved connections. This application is built on angular 10 and I have integrated server-side rendering for SEO optimization and deploy into the google cloud platform. All APIs are built on cloud infrastructure having cloud functions.
